SUMMARY

Motivated and detail-oriented Electronics and Communication Engineering undergraduate with a basic foundation in data structures & algorithms, and full-stack web development. Proficient in building modern web applications using the MERN stack, with hands-on exposure to AI-based surveillance concepts using Raspberry Pi, OpenCV, and YOLO through project-based learning. Eager to apply strong problem-solving skills and a genuine passion for technology in a Software Development or Full-Stack Engineering role.

TECHNICAL SKILLS

Languages: C, C++(DSA & OOP), JavaScript

Web Technologies: HTML5, CSS3, Tailwind CSS, React.js, Node.js, Express.js

Databases & APIs: MySQL, MongoDB, REST APIs

Tools & Platforms: Git & GitHub, Vite, Postman, Cloudinary, JWT Authentication, Google OAuth, SMTP Email (Nodemailer).

Productivity Tools: MS Excel, MS Word, MS Power Point

AI & Embedded Systems: Raspberry Pi, OpenCV, YOLO Object Detection

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Database Management

AI-Assisted Development: GitHub Copilot, Google Antigravity, Claude Code, Google Stitch (AI UI/UX design)

PROJECTS

AI-Powered Smart Surveillance System(<https://github.com/Subhas2003/smartcctv>)

- Building a full-stack surveillance platform using the MERN stack, integrating Raspberry Pi camera modules with AI-based object and fire detection.
- Applying OpenCV and YOLO models for object recognition and security event detection as part of a hands-on learning project.
- Developing real-time video monitoring, alert generation, and event recording features.
- Designing a responsive web dashboard with React, Tailwind CSS, and Node.js, with secure authentication via JWT and Google Sign-In/Sign-Up, backed by SMTP-based email OTP verification, plus role-based access control.
- Used GitHub Copilot and Google's AI coding assistant to accelerate boilerplate development, while independently architecting the core authentication and detection logic.

Full-Stack E-Commerce Platform(github.com/Subhas2003/E-commerce-Website)

- Built a full-stack e-commerce platform (React, Vite, and Tailwind CSS on the frontend; Node.js/Express and MongoDB/Mongoose on the backend) supporting product browsing, cart management, checkout, and order tracking.
- Implemented JWT-based authentication with HTTP-only cookies and role-based access control, powering a dedicated admin dashboard for product management, order tracking, and sales reports.
- Integrated Cloudinary for image uploads and media management, and Nodemailer for transactional emails including password reset.
- Designed a fully responsive UI with React and Tailwind CSS, enhanced with GSAP-powered page transitions, optimized for both desktop and mobile use.
- Used GitHub Copilot and Claude to speed up routine coding tasks while independently handling core logic and integrations.

CERTIFICATIONS

Full Stack Web Development | GeeksforGeeks |

- Covered HTML, CSS, JavaScript, React.js, Node.js, Express.js, MongoDB, and REST API development.

EDUCATION

Techno Main Salt Lake, Kolkata

Bachelor of Technology (B.Tech), Electronics & Communication Engineering

Graduation: 2026

ACADEMIC INTERESTS

Software Development Engineering (SDE) • Full-Stack Web Development • Artificial Intelligence & Computer Vision • Embedded Systems & IoT

LANGUAGES

Bengali (Native) • Hindi (Professional Working Proficiency) • English (Professional Working Proficiency)
